

# Wonderful Plants II

## Dr. Jan Scholten

March 31st and April 1st 2017  
BARCELONA (SPAIN)

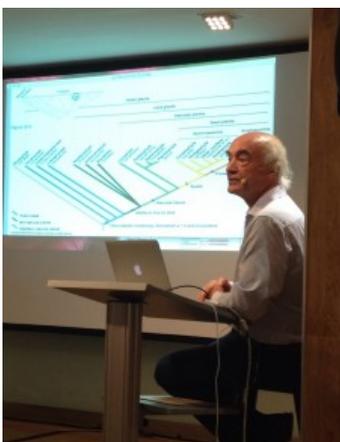

Dr. Jan Scholten's work about the elements of the periodic table has been for many people a milestone of homeopathy. His work establishes a similarity between the rows and columns of the periodic table with series or themes and stages. Its success has been widely contrasted and confirmed with thousands of cases cured.

This time Dr. Jan Scholten goes one step further, and proposes a new way of classifying the plant kingdom, and at the same time, it brings us a new way of reaching the simulum of our patients. The same laws of nature, which can be seen behind the series and stages of the periodic table, can also be found in the plant families after deepening the work of Dr. Scholten.

Plants accumulate minerals, so it is not surprising that they reflect the issues of the periodic table, even in its own way and much more complex than the world of chemical elements. This intense and exciting seminar is the second part of the "Wonderful Plants I" Seminar that Sholten gave in May 2015 in Barcelona, also organized by the AMHB.

### Dr. Jan Scholten

Jan Scholten is a recognized international homeopathic doctor who has been dedicated to the promotion of homeopathy in different aspects for more than 20 years. Thanks to his research has been added many remedies to Homeopathic Materia Medica. He has written numerous books, the most prominent and well-known references to his discoveries of the elements of the periodic system.
